

Approach SOC Services

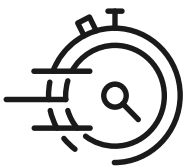

Managed Detection and Response

Our modern Security Operations Centre (SOC) services offer the most efficient answer to quickly detect and neutralise cyber-attacks before they hit you.

No organisation is safe from cyber-attacks

The digital transformation and adoption of homeworking provides cybercriminals with new opportunities every day. As they look to monetise their activities, they constantly launch targeted and non-targeted wide-scale attacks to reach a maximum of vulnerable organisations no matter the size or industry.

Speed is key to survive the cyber war

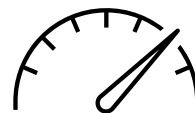

With the help of an AI-driven unified XDR (eXtended Detection and Response) platform, threat intelligence (CTI) and automation (SOAR), our SOC experts are able to detect and automatically neutralise the attacks against all of your endpoints, network, infrastructures and cloud services.

Traditional solutions are no longer enough

As hackers continue to evolve and develop more sophisticated techniques, traditional antiviruses can't keep up. More than 60% of attacks are non-malware related, involving hands-on-keyboard activity with legitimate tools. These attack techniques are able to disable defences or slip under the radar and go undetected.

A high value SOC service

Thanks to the XDR platform, our SOC analysts can focus their time and energy on high value activities, performing regular threat hunting exercise, complex investigation and provide technical guidance to continuously improve your security posture.

Key numbers

2 out of 3 companies were victims of cybercrime on more than two occasions

Source: Hiscox Cyber Readiness Report 2021

1 out of 5 companies were victims of a ransomware attack

Source: Mastercard Report

2 out of 5 SMBs were victims of a cyber-attack

Source: Proximus Cyber Security Survey

2 out of 5 Belgian companies were victims of a cybercrime

Lifetime of a cyber-attack

Within a matter of minutes, an attack can cause damage to your business. The longer it takes to detect and neutralise the threat, the bigger the impact and the consequences could be catastrophic.

Our solutions

Rest easy knowing that our solution provides you with fast and efficient detection as well as highly automated threat neutralisation on your IT systems.

Managed Detection and Response

Anticipate

- Threat surveillance
- Cyber-attack monitoring
- Threat hunting

Protect

- Vulnerability check
- Next-gen anti malware
- 24x7 automated neutralisation

Detect

- Endpoint Detection & Response (EDR)
- Network Detection & Response (NDR)
- SIEM
- Honeypots

Respond

- Hyper automated remediation
- Sandboxing
- Digital forensics
- Continuous improvement

Unified dashboard
Automation and orchestration (SOAR)

24x7 or 8x5
incident handling
(CSIRT)

Your benefits

Fast action: real-time detection and automated remediation stop the cyber-attack before it hits.

Easy and fast integration: our solution easily integrates into your existing infrastructure.

Peace of mind: focus on your core business and get top-notch cyber security support from real experts.

Affordable: our scalable solution is adapted to your needs and size.

Data sovereignty: based in Belgium, we keep your data local and comply with all EU regulations.

Why Approach?

Expertise: tap into our 20+ years of experience as a pure-play cyber security and privacy service provider.

Customer centric: we care about all of our customers and you are always our priority.

Customer proximity: our local resources understand the Belgian context and your needs.

Comprehensive SOC services: phishing campaigns, vulnerability management, pentesting, WAF & CSIRT.

Additional services: we can provide support through consulting, coaching, solution integration and more.
